### Installation Notes

1. Check measure appliance and ensure cabinet is constructed square and to dimensions required.
2. The oven is recommended for Wall Mounted installations.
3. Make sure that surrounding materials are heat resistant.
4. Oven support surface must be a minimum of 19mm thick plywood platform, solid, level and flush with the bottom of the cabinet cutout.
5. Oven is very heavy. Be very careful moving over surfaces & into cabinetry to avoid damage.
6. Align the oven centrally with respect to the side walls of the unit surrounding it and fix it in place carefully with the screws provided. Check oven is level & take care not to pinch wiring at oven rear.

# Installation Hints & Electrical Information

## Installation Hints & Electrical Information

### Instructions

Wall ovens should be mounted so that when the door is open fully, the top of the door is approximately waist level to allow the user easy access to the oven.

So that your oven maintains its efficient sealing capacity for the life of the appliance, NEVER USE THE DOOR AS A LEVER (especially when the oven is being installed into its recess). Similarly undue pressure must never be placed on the oven door when it is open.

### Electrical Connection

Connection to electrical mains must only be performed by a licenced electrical contractor. All care must be taken to ensure the installation is properly earthed and conforms to local codes. Ensure enough flex is provided when connecting electrical connections to allow for ease of installation and servicing of the appliance.

### Installation of wall ovens in vacuum formed vinyl/plastic materials

When wall ovens are installed in situations in conjunction with vacuum formed vinyl/plastic materials, formed onto a base material, it is essential to avoid direct radiation onto these surfaces and edges of doors and panels adjacent to the sides and top of the wall oven.

It is recommended that a heat barrier be fitted to avoid this radiated heat. (NOT SUPPLIED - Customer responsibility).

Following are two methods of protecting the doors or panels to the side of the oven, and one to protect the cabinets above the oven.

No responsibility can be accepted for any claims regarding the surrounding doors and panels if the installation is not to an approved manner.
